ELECTRONIC HEALTH SOLUTIONS

1. Introduction

This document covers the configuration and technical side of UJO7 Version 2, it includes the following:

- Technical side:
 - UJO7 files and fields.
 - UJO7 APIs.
- ADPAC and configuration side:
 - Adding a new message configuration into the UJO7 MESSAGE CONFIGURATION file #400037007.
 - Adding a new trigger.
 - Activating/Deactivating triggers.
 - Configuration of Acknowledgment Message.

In order to send HL7 message correctly from source to destination, it should have a proper configuration. And a trigger has to be built and activated. The trigger is responsible for initiating message building and sending process.

1.1 Prerequisites and Dependencies

1. Sufficient knowledge of M language and programming skills.
2. Familiar with GT.M environment and GT.M triggers
Find more information about GT.M and M language at the link below:
<http://fis-gtm.com>
3. FileMan and Kernel functionalities and HL7 main concepts
Find more information at the link below:
<http://www.va.gov/vdl>
4. Understand UJO error-handling.
Link will be added later
5. Install all patches that are related with UJO7 version 1.0
Find more information at the link below:
http://10.123.30.30/svn/HL7/HL7_Interface/Define

3. UJO7 API's

The following API's are used with HL7 messages and HL7 acknowledgment message:

3.1 \$\$MSASEGB^UJO7ACK

This API is used to build an array contains the session variables of MSA segment in the acknowledgment message and their values.

Syntax: MSASEGB^UJO7ACK(ACK,ID,TXT,CON,SARR,MSGERR)

Input parameters: ACK : Acknowledgment code (ACKCODE) session variable.
ID : Message control ID (MSGCONID) session variable.
[TXT] : Text message (TXTMSG) session variable. (optional)
[CON] : Error condition (ERRCON) session variable. (optional)

Output parameters: SARR : This array to hold the resulted MSA variable array.
QUDA [MSGERR] : Passed by reference to contain error messages. (optional)

Return : 0 : Fail
1 : Success

3.2 \$\$ERRSEGB^UJO7ACK

This API is used to build an array that contains the session variables of ERR segment in the acknowledgment message and their values.

(Note: you must use the same array to build MSA and ERR session variables array)

Syntax: \$\$ERRSEGB^UJO7ACK(ERRSEGID,CODELOC,LOC, CODE,APPERR,APPERRP,USRMSG,PIND,SARR,MSGERR)

Input parameters: ERRSEGID : Sequence number of ERROR segment.
[CODELOC] : Error code and location (ERRCL) session variable. (optional)
[LOC] : Error location (ERRLOC) session variable. (optional)
[CODE] : HL7 Error condition (ERRCODE) session variable. (optional)
[APPERR] : Application Error code (APPERR) session variable. (optional)

Confidentiality and Copyright Statement

This document and all copyrights and any other intellectual property rights relating to it are the property of Electronic Health Solutions (EHS). This document contains Confidential Information. It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

© Copyright 2010 Electronic Health Solutions (EHS) All rights reserved

ELECTRONIC HEALTH SOLUTIONS

[APPERRP] : Application Error parameter (APPERRP) session variable. (optional)

[USRMSG] : User message (USRMSG) session variable. (optional)

[PIND] : Inform person indicator (PIND) session variable. (optional)

Output parameters: SARR : This array to hold the resulted ERR variable array (must use the same array used to build MSA array).

[MSGERR] : Passed by reference to contain error messages. (optional)

Returns: 0 : Fail

1 : Success

3.3 \$\$MAINACK^UJO7ACK

This API is used to build and send the acknowledgment message.

(**Note:** use the array you built before using the above API's)

Syntax: \$\$MAINACK^UJO7ACK(VARARR,EVDVR,MSGCFG,MSGERR)

Input parameters: VARARR : Array which holds session variables as subscript and their values.

EVDVR : Event driver name.

MSGCFG : Message configuration name.

Output parameters: [MSGERR] : Passed by reference to contain error messages. (optional)

Return: 0 : Fail

1 : Success

3.4 GETFLDVL^UJO7FPUT

This API is used to append the value to the work array, based on input parameters. This is used mainly in the processing routine.

Syntax: GETFLDVL^UJO7FPUT(FILENUM,FIELDNUM,VALIEN,MSGNAME,SEGNAME,FLDNAME,RPNUM,CMPNUM,SUBCMNUM)

Input parameters: FILENUM : The file number to get the data from

FIELDNUM : The field number to get the data from

VALIEN : The internal number of the record to get the data from

MSGNAME : The name of the message configuration

Confidentiality and Copyright Statement

This document and all copyrights and any other intellectual property rights relating to it are the property of Electronic Health Solutions (EHS). This document contains Confidential Information. It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

© Copyright 2010 Electronic Health Solutions (EHS) All rights reserved

ELECTRONIC HEALTH SOLUTIONS

SEGNAME : The name of the segment configuration
FLDVALUE : The value of the field
[REPNUM] : The repeater position number (optional)
[COMPNUM] : The component position number (optional)
SUBCOMNUM: The sub component position number

3.5 GFLDPRTN^UJO7FPUT

This API is used to append the value to the work array, based on input parameters. This is used mainly in the processing routine.

Syntax: GFLDPRTN^UJO7FPUT(MSGNAME,SEGNAME,FLDNAME,FLDVALUE,RPNUM,CMPNUM,SUBCMNUM)

Input parameters: MSGNAME : The name of the message configuration
SEGNAME : The name of the segment configuration
FLDNAME : The name of the field configuration
FLDVALUE : The value of the field
REPNUM : The repeater position number
COMPNUM : The component position number
SUBCOMNUM: The sub component position number

3.6 \$APWRKARY^UJO7FPUT

This API will append the value to the work array, based on input parameters. This is used mainly in the processing routine.

Syntax: APWRKARY^UJO7FPUT(VALUE,RETARY,SEGNAME,SEQNUM,FLDNUM,REPNUM,COMPNUM,SUBCOMNUM)

Input parameters: VALUE : The value of the field
RETARY : The work array name (STRING)
SEGNAME : The segment name
SEQNUM : The segment sequence number
FLDNUM : The field position number
[REPNUM] : The repeater position number (optional)
[COMPNUM] : The component position number (optional)

It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

© Copyright 2010 Electronic Health Solutions (EHS) All rights reserved

ELECTRONIC HEALTH SOLUTIONS

SUBCOMNUM: The sub component position number

Return: 1 : success
0 : fail

3.7 \$MAIN^UJO7TRGR

This API is used to build and send HL7 message, based on the message configuration file.

Syntax: MAIN^UJO7TRGR(EVDRVR,MSGCFGN,MSGERR)

Input parameters: EVDRVR : Event driver name.

MSGCGFN : Message configuration name.

Output parameters: [MSGERR] : Passed by reference to contain error messages.(optional)

Return: 0 : Fail
1 : Success

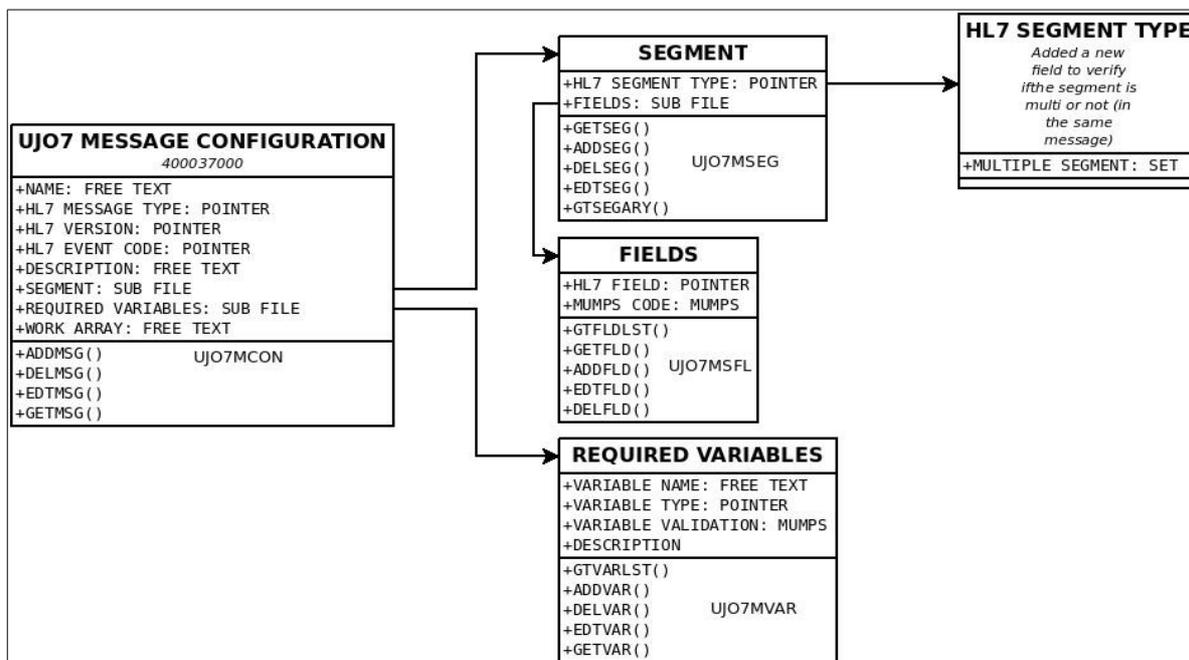

Confidentiality and Copyright Statement

4. UJO7 Message Builder

UJO7 Message Builder is developed to build all HL7 messages from one function. “Message Builder” constructs the message segments and fields based on UJO7 MESSAGE CONFIGURATION file #400037007.

4.1 Message Builder Configuration

The following menus must be assigned for those user needs to configure message builder:

- UJO7 Framework Main Menu [UJO7 FRAMEWORK MAIN MENU]
- Message Builder Main Menu [UJO7 MSG BUILDER CONFIG. MENU]

Confidentiality and Copyright Statement

This document and all copyrights and any other intellectual property rights relating to it are the property of Electronic Health Solutions (EHS). This document contains Confidential Information. It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

ELECTRONIC HEALTH SOLUTIONS

```
CHOOSE 1-5: 3  UJ07 FRAMEWORK MAIN MENU      UJ07 Framework Main Menu

      BLD   Message Builder Main Menu ...
      TRG   UJ07 GT.M TRIGGER MANAGAMENT ...

Select UJ07 Framework Main Menu Option: MESSAge Builder Main Menu

1      Enter/Edit Message Configuration
2      Enter/Edit HL7 Field
3      Enter/Edit HL7 Segment
```

4.1.1 Message Configuration

“Enter/Edit Message Configuration [UJO7 MSG CONFIG. ENTER/EDIT]” option is used to create a new HL7 Message, this option prompts to enter:

- **UJO7 MESSAGE CONFIGURATION NAME:** the name of the new HL7 message.
- **HL7 MESSAGE TYPE:** type of the message (pointer to the HL7 MESSAGE TYPE file #771.2).
- **HL7 VERSION:** HL7 version (pointer to HL7 VERSION file #771.5).
- **HL7 EVENT TYPE CODE:** pointer to the HL7 EVENT TYPE CODE file #779.001.
- **DESCRIPTION:** write a brief description of the HL7 message.
- **HL7 SEGMENT TYPE:** this a multiple field that contains segments in the message.
- **HL7 FIELD:** this is a multiple field that contains HL7 fields that related to a segment.
- **PROCESSING ROUTINE:** the routine that will get the value of the HL7 field.

You can use the following API's as processing routine:

- GETFLDVL^UJO7FPUT(FILENUM,FIELDNUM,VALIEN,MSGNAME,SEGNAME,FLDNAME,RPNUM,CMPNUM,SUBCMNUM)
This processing routine will get the value of the field from a file using the IEN of the record:
 - FILENUM : The file number to get the data from

Confidentiality and Copyright Statement

This document and all copyrights and any other intellectual property rights relating to it are the property of Electronic Health Solutions (EHS). This document contains Confidential Information. It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

ELECTRONIC HEALTH SOLUTIONS

- **FIELDNUM** : The field number to get the data from
 - **VALIEN** : The internal number of the record to get the data from
 - **MSGNAME** : The name of the message configuration
 - **SEGNAME** : The name of the segment configuration
 - **FLDNAME** : The name of the field configuration
 - **REPNUM** : The repeater position number (optional)
 - **COMPNUM** : The component position number (optional)
 - **SUBCOMNUM** : The sub component position number
- **GFLDPRTN^UJO7FPUT(MSGNAME,SEGNAME,FLDNAME,FLDVALUE,RPNUM,COMPNUM,SUBCOMNUM)**
This processing routine will get the value of the field from a file using a session variable variable:
- **MSGNAME** : The name of the message configuration
 - **SEGNAME** : The name of the segment configuration
 - **FLDNAME** : The name of the field configuration
 - **FLDVALUE** : The value of the field
 - **REPNUM** : The repeater position number
 - **COMPNUM** : The component position number
 - **SUBCOMNUM** : The sub component position number
- **VARIABLE NAME:** Session variable that the processing routine need to set values to HL7 field in the segment
 - **VARIABLE TYPE:** This is the variable type, pointer to the variable type file.
 - **VARIABLE VALIDATION:** This field holds a code that can validate the data inside the variable.[OPTIONAL]
 - **DESCRIPTION:** This field holds the description for this variable,and (why and where) it is used.
 - **WORK ARRAY:** Holds the name of the working array that will hold the message data that will be filled by the builder and the fields processing routines.

Ex. to create a new HL7 message named TESTPID:

Confidentiality and Copyright Statement

ELECTRONIC HEALTH SOLUTIONS

```
Select UJ07 MESSAGE CONFIGURATION NAME:

1      Enter/Edit Message Configuration
2      Enter/Edit HL7 Field
3      Enter/Edit HL7 Segment

Select Message Builder Main Menu Option: 1 Enter/Edit Message Configuration

Select UJ07 MESSAGE CONFIGURATION NAME: TESTPID
Are you adding 'TESTPID' as
a new UJ07 MESSAGE CONFIGURATION (the 6TH)? No// YES (Yes)
NAME: TESTPID//
HL7 MESSAGE TYPE: ADT          ADT message
HL7 VERSION: 2.4             HEALTH LEVEL SEVEN
HL7 EVENT TYPE CODE: A08     ADT/ACK-Update patient information
DESCRIPTION: THIS IS A TEST MESSAGE
Select HL7 SEGMENT TYPE: PID      Patient Identification
Are you adding 'PID' as a new SEGMENTS (the 1ST for this UJ07 MESSAGE CONFIGURATION)? No// YES (Yes)
Select HL7 FIELD: PATIENT NAME   PID PID
Are you adding 'PATIENT NAME' as a new FIELDS (the 1ST for this SEGMENTS)? No// YES (Yes)
PROCESSING ROUTINE: DO GFLDPRTN^UJ07FPUT("A08TEST","PID","PATIENT NAME",VARR,1,1,1)
Select HL7 FIELD:
Select HL7 SEGMENT TYPE:
Select VARIABLE NAME: VARR
Are you adding 'VARR' as a new VARIABLE NAME (the 1ST for this UJ07 MESSAGE CONFIGURATION)? No// YES (Yes)
VARIABLE TYPE: NUMERIC
VARIABLE VALIDATION:
DESCRIPTION:
Select VARIABLE NAME:
WORK ARRAY: TESTARR
```

4.1.2 HL7 Segment Configuration

“Enter/Edit HL7 segment [UJ07 HL7 SEGMENT ENTER/EDIT]” option is used to to add a new HL7 segment, this option prompts to enter:

Confidentiality and Copyright Statement

This document and all copyrights and any other intellectual property rights relating to it are the property of Electronic Health Solutions (EHS). This document contains Confidential Information. It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

ELECTRONIC HEALTH SOLUTIONS

- **HL7 SEGMENT TYPE ABBREVIATED NAME:** a three letter abbreviated name of the segment.
- **HL7 SEGMENT TYPE FULL NAME:** HL7 segment full name.
- **VERSION:** HL7 version.
- **PROCESSING ROUTINE:** The routine that will be run to process data in the segment. For more details about “processing routines” Refer to: <http://www.va.gov/vdl/application.asp?appid=8>
The following example use EN1^HLO to build ZRD segment.
- **GENERATION ROUTINE:** The routine that generate the segment.
- **MULTIPLE FLAG:** If set to 1 then this segment is a multiple segment, this means that it can be repeated in the same HL7 message.

Ex. to create a new ZRD segment:

```
Select Message Builder Main Menu Option: 3  Enter/Edit HL7 Segment

Select HL7 SEGMENT TYPE ABBREVIATED NAME: ZRD
Are you adding 'ZRD' as a new HL7 SEGMENT TYPE (the 176TH)? No// YES (Yes)
HL7 SEGMENT TYPE FULL NAME: ZRD TEST
ABBREVIATED NAME: ZRD//
FULL NAME: ZRD TEST//
Select VERSION: 2.4          HEALTH LEVEL SEVEN
Are you adding '2.4' as a new VERSION (the 1ST for this HL7 SEGMENT TYPE)? No
// YES (Yes)
PROCESSING ROUTINE: DO EN1^HLO
GENERATION ROUTINE: DO EN2^HLO
PROCESSING ROUTINE:
MULTIPLE FLAG:
```

4.1.3 HL7 Field Configuration

“Enter/Edit HL7 Field [UJO7 HL7 FIELD ENTER/EDIT] “option is used to to add a new HL7 field that doesn't exist in the HL7 FIELD file #771.1, this option prompts to enter:

- **NAME:** HL7 field name.
- **SEGMENT:** the segment that will use this HL7 field (this is a multiple, you can enter more than one segment).
- **DHCP FILE:**Each HL7 field that has a table number must have a corresponding DHCP file that contains the list of valid table entries.
For more details about DHCP Refer to: <http://www.va.gov/vdl/application.asp?appid=8>

Confidentiality and Copyright Statement

This document and all copyrights and any other intellectual property rights relating to it are the property of Electronic Health Solutions (EHS). This document contains Confidential Information. It may not be disclosed in whole or in part without the express written authorization of Electronic Health Solutions (EHS).

ELECTRONIC HEALTH SOLUTIONS

- **SEQUENCE:**The HL7 sequence number associated with the HL7 field
- **MAXIMUM LENGTH:** maximum length of the hl7 field.
- **DATA TYPE:** data type of hl7 field.
- **REQUIRED?:** enter 1 to make this field required and 0 to make it not required.
- **REPETITION:** The number of times the HL7 field can repeat within an HL7 segment. If the field cannot repeat, leave this field blank.
- **TABLE NUMBER:** Only fields that have an HL7 data type of ID (Coded Value) have a table number. The ID data type is equivalent to a Set of Codes or Pointer data type in VA FileMan. For locally defined fields, the table number should begin with the 2-4 character DHCP package namespace.
For more details about “table number” Refer to: <http://www.va.gov/vdl/application.asp?appid=8>
- **ITEM NUMBER:** The HL7 (or locally defined) table number associated with the HL7 (or locally defined) field (e.g., 0008 or RA0001).
- **PARENT:** If this entry is a component of a field or a subcomponent of a component, then the parent of the field/component is entered here.
- **APPLICATION:** the application that will use this HL7 field in its messages.
- **VERSION:** the HL7 version.
- **SAMPLE DHCP VALUE:** this a sample of DHCP value.
For more details about DHCP Refer to: <http://www.va.gov/vdl/application.asp?appid=8>
- **SAMPLE HL7 VALUE:** this is a sample of what the field data my look like.
- **DESCRIPTION:** the description of the field.

Ex. to make a new HL7 field that will be used in the PID segment:

5. UJO7 GT.M Trigger

Triggers are implemented to fire based on a database field(s) change that will allow execution of MUMPS code which is responsible of initiating the process of building and sending the HL7 message.

UJO7 present an options to facilitate the way to add, configure, and activate/deactivate a trigger, also you can view the trigger log and trigger operations logs. The figures below show the design and the work flow of the UJO7 GT.M trigger:

UJO7 GTM TRIGGER DEFINITION	UJO7 GTM TRIGGER ACT/DEACT LOG
+TRIGGER NAME: FREE TEXT +GLOBAL VARIABLE: FREE TEXT +COMMAND: FREE TEXT +DELIM: FREE TEXT +PIECES: FREE TEXT +TRIGGER CODE: MUMPS	+DATE TIME: DATE +ACTIVATOR/DEACTIVATOR: FREE TEXT +ACTIVATION STRING: FREE TEXT
+UJO7 EDIT GT.M TRIGGER FILE(): EDIT +UJO7 ACTIVATE TRIGGER(): RUN ROUTINE	+UJO7 VIEW LOG(): INQUIRE +UJO7 PURGE LOGS(): RUN ROUTINE

Confidentiality and Copyright Statement

5.1 UJO7 GT.M Trigger Configuration

The following menus must be assigned for those user needs to configure GT.M trigger:

- UJO7 framework main menu [UJO7 FRAMEWORK MAIN MENU]
- UJO7 GT.M trigger management [UJO7 GTM TRGR MANAGEMENT] menu.

```
CHOOSE 1-5: 3  UJO7 FRAMEWORK MAIN MENU      UJO7 Framework Main Menu

BLD  Message Builder Main Menu ...
TRG  UJO7 GT.M TRIGGER MANAGMENT ...

Select UJO7 Framework Main Menu Option: UJO7 GT.M TRIGGER MANAGMENT

VIEW CURRENT GT.M TRIGGERS
EDIT UJO7 GTM TRIGGER DEFINITION FILE
ACTIVATE/DEACTIVATE UJO7 GT.M TRIGGER
LOG GT.M TRIGGER DEFENITION FILE OPERATIONS ...
```

1. “View current GT.M triggers [UJO7 VIEW CURRENT GTM TRIGGERS]” option to view the active triggers

```
Select UJO7 GT.M TRIGGER MANAGMENT Option: VIEW CURRENT GT.M TRIGGERS

;trigger name: TEST3#  cycle: 5
+^DPT(IEN=*,0) -name=TEST3 -commands=S -delim="^" -pieces=1 -xecute="DO NAME^UPD
ATE"
;trigger name: USERSSN2#  cycle: 7
+^VA(200,IEN=*,1) -name=USERSSN2 -commands=S -delim="^" -pieces=9 -xecute="DO SS
N^UPDATE"
```

2. “Edit UJO7 GT.M trigger definition file “[UJO7 EDIT GT.M TRIGGER FILE]” option is used to create/edit a trigger. This option prompts to enter:
 1. **NAME:** trigger name
 2. **GLOBAL VARIABLE:** the global location of the field which will fire the trigger.(enter global variable without the ^).
 3. **COMMAND:** mumps command that the trigger will be fired on. ex(set, kill,)
 4. **DELIM:** the delimiter sign to be used to get field value from global location.
 5. **PIECES:** the pieces of the global node that will be used in the trigger.

Confidentiality and Copyright Statement

6. **TRIGGER ROUTINE:** the routine that will execute when the trigger occur.

(**Note that** you cannot edit a trigger after activate it, you must deactivate it and then edit this trigger.)

The example below show how to create a trigger that will be fired on the set command on the SSN field of the NEW PERSON file #200:

```
Select UJO7 GT.M TRIGGER MANAGAMENT Option: EDIT UJO7 GTM TRIGGER DEFINITION FILE
Select UJO7 GTM TRIGGER DEFINITION TRIGGER NAME: SSNUP
Are you adding 'SSNUP' as
a new UJO7 GTM TRIGGER DEFINITION (the 7TH)? No// YES (Yes)
TRIGGER NAME: SSNUP//
GLOBAL VARIABLE: VA(200,IEN=*,1)
COMMAND: SET
DELIM: "^"
PIECES: 9
TRIGGER CODE: DO SSN^UPDATE
```

3. “Activate/Deactivate UJO7 GT.M trigger [UJO7 ACTIVATE TRIGGER]” option is used to activate/deactivate a trigger. The example below show how to activate a trigger:

```
Select UJO7 GT.M TRIGGER MANAGAMENT Option: ACTIVATE/DEACTIVATE UJO7 GT.M TRIGGER
Select UJO7 GTM TRIGGER DEFINITION TRIGGER NAME: USERSSN
Select one of the following:
+      ACTIVATE
-      DEACTIVATE
Please select either to activate or deactivate the selected trigger: + ACTIVATE
Added trigger on ^VA named USERSSN#
```

4. “Log GT.M trigger definition file operations [UJO7 TRIGGER LOG]” menu contains the following option to manage the log activities

1. “View GT.M trigger definition file operations logs [UJO7 VIEW LOG]” option is used to view the log

6. Acknowledgment Message Configuration

You need to do the following configuration to be able to use Acknowledgment API's and send it:

First you need to add the multi flag for ERR segment:

for more information about multiflag refer to: 4.1.3 **HL7 Field Configuration**

```
Select OPTION NAME: UJO7 FRAMEWORK MAIN MENU      UJO7 framework main menu
  BLD  Message builder main menu ...
  TRG  UJO7 GT.M trigger management ...
Select UJO7 framework main menu Option: BLD  Message builder main menu
  1   Enter/Edit message configuration
  2   Enter/Edit HL7 field
  3   Enter/Edit HL7 segment
Select Message builder main menu Option: 3  Enter/Edit HL7 segment
Select HL7 SEGMENT TYPE ABBREVIATED NAME: ERR      Error
ABBREVIATED NAME: ERR//
FULL NAME: Error//
Select VERSION: 2.5//
  VERSION: 2.5//
  PROCESSING ROUTINE:
  GENERATION ROUTINE:
PROCESSING ROUTINE:
MULTIPLE FLAG: 1  MULTIPLE SEGMENT
```

Then, change the sequence of ERROR CODE AND LOCATION FIELD and add the following fields to HL7 field file:

```
Select UJO7 framework main menu Option: Message builder main menu
  1   Enter/Edit message configuration
  2   Enter/Edit HL7 field
  3   Enter/Edit HL7 segment

Select Message builder main menu Option: Enter/Edit HL7 field

Select HL7 FIELD NAME:  ERROR CODE AND LOCATION ERR ERR
NAME: ERROR CODE AND LOCATION  Replace
SEGMENT: ERR//
DHCP FILE:
SEQUENCE: 1// 2
MAXIMUM LENGTH: 80//
DATA TYPE: ID// ^
```

7. Example of sending HL7

The following example show how to send HL7 using UJO7 configuration file and UJO7 GT.M trigger:

- DO ^XUP and do the following:

```
Select OPTION NAME: UJO7 FRAMEWORK MAIN MENU    UJO7 framework main menu
```

```
BLD  Message builder main menu ...
```

```
TRG  UJO7 GT.M trigger management ...
```

```
Select UJO7 framework main menu Option: BLD  Message builder main menu
```

```
1   Enter/Edit message configuration
```

```
2   Enter/Edit HL7 field
```

```
3   Enter/Edit HL7 segment
```

```
Select Message builder main menu Option: 1  Enter/Edit message configuration
```

```
Select UJO7 MESSAGE CONFIGURATION NAME: UJO TEST
```

```
Are you adding 'UJO TEST' as
```

```
  a new UJO7 MESSAGE CONFIGURATION (the 5TH)? No// Y (Yes)
```

```
NAME: UJO TEST//
```

```
HL7 MESSAGE TYPE: ADT    ADT message
```

```
HL7 VERSION: 2.4    HEALTH LEVEL SEVEN
```

```
HL7 EVENT TYPE CODE: A08    ADT/ACK-Update patient information
```

```
DESCRIPTION: This is a test message.
```

```
Select HL7 SEGMENT TYPE:    PID    Patient Identification
```

```
Are you adding 'PID' as a new SEGMENTS (the 1ST for this UJO7 MESSAGE CONFIGURATION)? No// Y (Yes)
```

```
Select HL7 FIELD: PATIENT NAME    PID PID
```

```
Are you adding 'PATIENT NAME' as a new FIELDS (the 1ST for this SEGMENTS)? No
```

Confidentiality and Copyright Statement
